

Today, virtually every decision maker expects easy, smart access to their ERP data for informed, productive thinking.

While any ERP will house that data, most stop short of providing intuitive access. And most don't produce reports that facilitate sophisticated decision-making.

Unlocking Your ERP Data: That's Why We Built CloudDecisions

CloudDecisions extracts data from your ERP on a schedule you define, saving your IT team countless hours they would otherwise spend on manual data organization and report creation. Stored in an SQL database, the data can be presented in a format of your choice—Excel spreadsheets or Microsoft's Power BI.

CloudDecisions contains dozens of standard charts, graphs, and pivot tables for essential functional areas including past sales, past purchases, inventory, accounts payable, accounts receivable, open sales orders, open purchase orders, quotes, and general ledger. And, the built-in graphical representations make identifying trends and anomalies easier and faster to spot. Custom charts, graphs, and pivot tables can be easily added.

WHY CHOOSE CLOUDDDECISIONS?

If you're in the early stages of using business performance management tools, then **CloudDecisions** is the application for you.

These are just some of the benefits of **CloudDecisions**:

- Saves time and money when creating ERP reports.
- Provides built-in graphical analysis, which is more powerful than plain spreadsheets.
- Ideal for sharing information and group presentations.
- Storing data in an SQL database allows for analysis to be conducted outside of the ERP database, rather than impacting daily ERP processes.
- A comparatively low-cost solution for warehousing ERP data.
- Leverages existing Excel user licenses.

CloudDecisions is a cloud application that runs on E&A's Azure environment and is sold on a subscription basis. Standard licenses for Excel and/or Power BI are required.

TAKE THE NEXT STEP

Upgrade your decision-making capabilities with an application that saves you time and money. Relieve your IT team from the burden of manually extracting and presenting ERP data, and start your journey to more advanced reporting with **CloudDecisions**.
